

## **IN THE CLAIMS**

Please cancel claims 1-18, all of the claims set forth in the verified translation of PCT/EP2004/051178. Please also cancel claims 1-18 as filed by KBA under Article 19 on May 3, 2005. Please add new claims 19-36 as follows.

Claims 1-18 (Cancelled)

19. (New) A printing press comprising:

at least one printing unit including at least one pair of cylinders including a forme cylinder and a transfer cylinder;

a drive connection mechanically coupling said forme cylinder and said transfer cylinder;

a drive motor engageable with said drive connection and adapted to rotate said forme cylinder and said transfer cylinder through said drive connection;

a first operating side of the printing press; and

a second side of the printing press and facing away from said first, operating side, both said drive connection and said drive motor being situated on said first, operating side.

20. (New) The printing press of claim 19 including first and second spaced lateral frames defining said first and second sides, each of said first and second lateral frames having printing unit connection points, and further including ends of said forme cylinder and said transfer cylinder, said ends being received in said lateral frames, said

connection points being adapted to receive an operating element of said printing unit.

21. (New) A printing press comprising:

at least first and second printing units;

at least one pair of cylinder, including a forme cylinder and a transfer cylinder, in each of said at least first and second printing units;

first and second spaced lateral frames adapted to receive ends of said at least one pair of cylinder; and

prepared connection points on both of said first and second lateral frames, said connection points each being adapted to receive a printing unit operating element.

22. (New) The printing press of claim 21 further including a prepared connection point for each of said first and second printing units.

23. (New) The printing unit of claim 19 further including a material supply unit and material supply unit frames having operating element connecting points.

24. (New) The printing unit of claim 20 further including a web draw-in guide device attached to said connection points.

25. (New) The printing unit of claim 19 further including a second pair of cylinders in said at least one printing unit and further wherein said drive connection couples said

first and second pairs of cylinders for being rotatably driven by said drive motor.

26. (New) The printing press of claim 19 further including a second cylinder pair and a second drive connection and a second drive motor adapted to drive said second cylinder pair independently of said one pair of cylinders.

27. (New) The printing press of claim 21 further including a first, operating side of said printing press and a second side of said printing press, and further including a cylinder drive motor and drive connector for each said cylinder pair on said operating side of said printing press.

28. (New) The printing press of claim 19 further including an imprinted and folded product delivery device located on said first, operating side.

29. (New) A printing press installation comprising:

at least first and second printing presses;

at least one material supply unit associated with each of said first and second printing presses;

at least first and second printing units in each one of said first and second printing presses;

at least one drive motor adapted to drive said printing units of each said printing press independently of other ones of said printing unit;

first and second lateral frames of each said printing press and defining a first, operating side and a second side facing away from said operating side;

at least one operating element provided on said lateral side of each said press defining said first, operating side;

a first one of said printing presses having said at least one drive motor on said operating side; and

a second one of said printing presses having said at least one drive motor on said opposite side.

30. (New) The printing press installation of claim 29 wherein each said printing unit is driven independently by at least one drive motor.

31. (New) The printing press installation of claim 29 wherein all of said printing units of said first printing press have printing unit drive motors on said operating side.

32. (New) The printing press installation of claim 29 wherein all of said printing units of said second printing press have drive motors on said opposite side.

33. (New) The printing press installation of claim 29 further including a linear traversing device connecting said at least first and second printing unit of said first printing press remote from said operating side.

34. (New) The printing press installation of claim 29 further including a first folded product delivery device associated with said first printing press and a second folded product delivery device associated with said second printing press, said first delivery

device being oriented to said operating side of said first printing press, said second delivery device being oriented to said side of said second printing press facing away from said at least one drive motor.

35. (New) The printing press installation of claim 29 wherein said first printing press and said second printing press are each provided with a longitudinal axis, said first and second printing press longitudinal axes extending parallel to, and spaced from each other.

36. (New) The printing press installation of claim 29 wherein said first printing press and said second printing press are each provided with a longitudinal axis and further wherein said longitudinal axes are aligned in a production direction of said first and second presses.
